4-wheeled container systems For LARGE demands

MGB 660 | MGB 770 | MGB 1100 flat lid | MGB 1100 domed lid MGB 1100 lid in lid | MGB 1100 automatic lock

As an innovative manufacturer of collection systems, SULO introduced the first plastic refuse containers with volumes of 660, 1000 and 1100 litre. Today, sales of the practical and efficient plastic refuse containers exceed those of traditional steel containers. SULO offers a comprehensive range of 4-wheeled container systems, with volumes ranging from 660 to 1100 litre. With decades of experience in product development and product advancement, we are constantly developing innovations for refuse collection. We apply the latest technologies, including computer simulation. Our main focus is on safety, quality and the ergonomic handling of containers. Our modern and high-performance manufacturing facilities ensure consistent quality to the highest levels. SULO containers are proven a million times over and have distinguished themselves through functionality, robust construction, safety and long service life.

4-wheeled container systems Safe, reliable and durable

MATERIAL + CONSTRUCTION

The plastic used is a specially developed HDPE (High Density Polyethylene).

SULO containers are resistant to decay, frost, heat and chemicals.

All metal components are corrosion resistant.

The wheels are especially silent and shock-absorbent due to solid rubber tyres.

All materials are recyclable.

All SULO containers are compatible with weighing and identification systems.

SULO containers are available in standard colours of grey, green, brown, blue, yellow and red. Special colours are available on request.

QUALITY

SULO Umwelttechnik is certified in accordance with DIN EN ISO 9001:2000. This guarantees our customers a recognised and certified quality management system.

All SULO containers are of course manufactured in accordance with DIN EN 840 standards. They also meet higher standards such as the Norm Francaise (NF) and have been awarded the quality mark RAL GZ 951/1, the highest quality standard for refuse containers. The tests are carried out by independent institutes and exceed the demands of EN 840. This guarantees the best quality, long service life and safety of the containers.

SAFETY + HANDLING

The specially developed rim with its double angle rail guarantees the highest safety during emptying and is fitted as standard with a chip nest in accordance with RAL 951/1.

Large, reinforced lifting trunnions with steel insert ensure increased stability and safety when lifting, even when the container is fully loaded.

The easy grip handles have an ergonomic design and are positioned on all sides for safe and easy manoeuvring, even when operators are wearing thick rubber gloves.

The specially reinforced base, wheel cases and front and rear panels of the container ensure high stability even in unfavourable conditions.

Smooth surfaces and rounded internal corners facilitate cleaning.

Containers can be safely and efficiently stacked, reducing the cost of transport and storage.

The perfectly designed water flow from the lid prevents water from entering the container when opening the lid. The rounded shape of the lid improves rainwater dispersal.

4-wheeled container systems The LARGE choice – for all purposes

CONTAINERS WITH DOMED LID

SULO offers three types of domed lidded containers from which to choose. You should, therefore, find a container suitable for all your requirements. All three types of domed lidded containers are, of course, fitted with safety lids in accordance with DIN standard EN 840-6.

The SULO 4-wheeled containers have well-known advantages such as ergonomic, easy grip handles on all sides and highly stable lifting trunnions.

The standard domed lidded container has an established and easy to use child safety device. To close the lid after use, the two buttons set within the lid must be pressed simultaneously. When the container is lowered after emptying, the lid closes automatically.

The domed lidded container with automatic lock is the ideal solution for those requiring lockable containers. During the emptying process, the lid opens and closes automatically through the lock's sophisticated gravity function. The container is equipped as standard with an automatic lock with a key cylinder. It can also be fitted with a standard half cylinder. It could even be fitted with the same lock as a door, so the user would not require an additional key for his refuse container.

Especially practical is the innovative, patented lid in lid solution. The light and very easy to use smaller lid facilitates filling the container. Furthermore, the lid in lid option offers cost-efficient container pool management. A change of fraction or use of the container can be achieved simply with a coloured smaller lid, rather than exchanging the container or even the main lid. Fitting the main lid with a lock prevents bulky waste being deposited in the container. SULO SULO Rein incre whe

CONTAINERS WITH FLAT LID

The flat lidded containers in the unique SULO design offer large capacity and a choice of sizes ranging from 660 to 1100 litre to suit all requirements. They distinguish themselves through easy handling and high efficiency. The easy grip handles on three sides of the lid allow for easy opening from all positions, even for smaller people and children. An additional grip rail is integrated into the front of the lid.

Reinforced lifting trunnions with steel insert, for increased stability and safety during emptying, even when fully loaded

ACCESSORIES

A comprehensive range of accessories is available for SULO 4-wheeled container systems.

Rear lid in lid for all domed lidded containers, various lid lock options, apertures, wheel options, individual markings and more offer perfect customised solutions for all applications.

Our complete range of accessories is contained within a separate brochure.

Easy grip handles with ergonomic design, for easy handling and manoeuvring
