Since 1993, we have been developing, producing and distributing collection systems for waste and reusable materials that unite form and function in every detail. For the manufacturing of the containers only high-quality materials are used for fields of application, in which functionality and a robust design are critical yardsticks – without giving up on an appealing design and an unmistakable profile.

As required by their location and components, sheets or pipes (of 1.25 to 6 mm thickness) made from stainless steel or rather zinc plated sheet steel are used. Materials that are predestined for continuous use and have to resist enormous strain. Waste and reusable material containers made from high-quality stainless steel are particularly weather resistant, resistant against vandalism, easy to empty and to maintain with customary, non-acidic cleaners.

When developing our products we work together closely with experts from the waste management, logistics and fire safety sectors, whose requirements as for efficient handling, security and efficiency are consequently implemented and further developed.

On request, we will be glad to talk to you about alternative surfaces (burled, perforated, polished plates, colours, etc.), materials, sizes or requirements.

TEMPTATION

JUMBO FFJ1 *volume 100 l*
width 550 mm, depth 500 mm, height 905 mm

The elegant, functional stainless steel Temptation boxes
(Quality 1.4301/AISI 304)

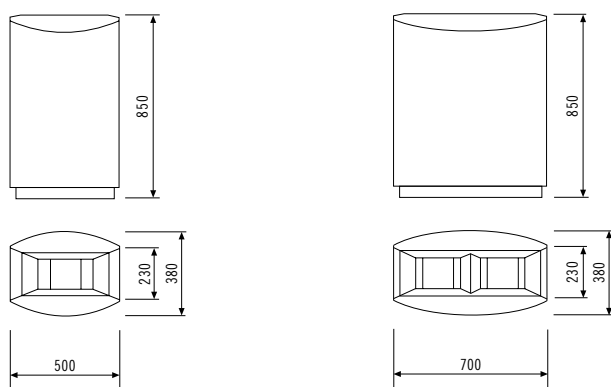

High safety standard waste bins are particularly needed for elaborately designed and very busy, roofed public areas like airports, railway stations, fairs, stadiums or hospitals.

These are requirements perfectly fulfilled by our Temptation series with its fire-protection system (certified by Linz Fire Protection Institute).

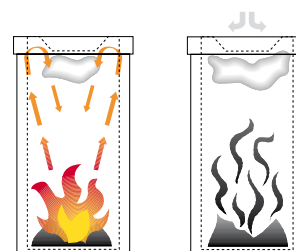

05

TEMPTATION

**Patented and certified
fire protection**

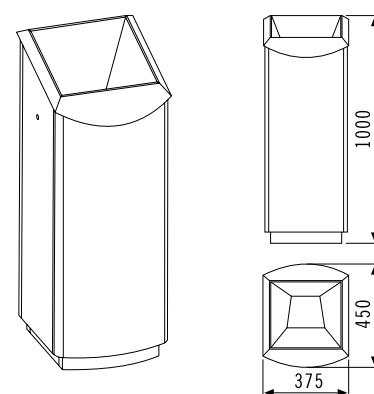

A self-extinguishing effect is caused by a combination of funnel-shaped drop openings with sealed metal inner containers. The special internal design does not allow the temperature at and below the casing to rise.

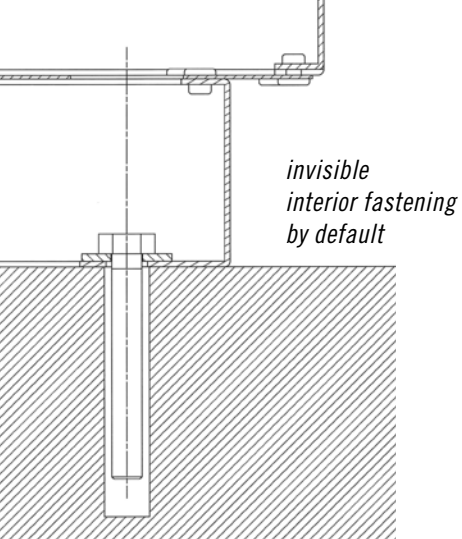

FF1 volume 70 l

FF2 volume 2 x 50 l

*Model METRO FFMS1 (on p. 3),
pedestal container with a slanting
extinguishing funnel attachment without
any depositing surface, volume 60 l,
width 375 mm, depth 45 mm*

- The boxes are operated quickly and easily from above. Contents are visible, rubbish sacks can be exchanged.
- To empty types FFJ2, FF3 and FF4 the lock has to be released, and the upper part will swing upwards automatically. All the other containers are opened manually.
- The hot-dip galvanized metal-sheet inner containers are removable for cleaning.

TEMPTATION

06

JUMBO FFJ2 volume 2 x 70 l
width 770 mm, depth 450 mm, height 925 mm

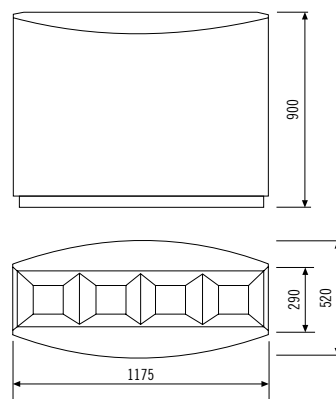

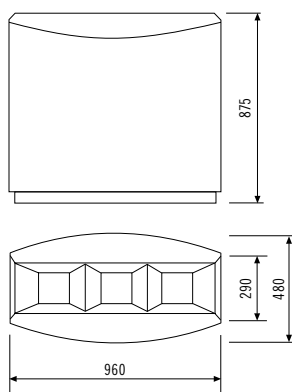

Base rolls and covers available on request

Ensured ashtrays that can be inserted at an incline available on request

07

TEMPTATION

FF3 volume 1 x 70 l und 2 x 50

FF4 volume 2 x 60 l und 2 x 55 l

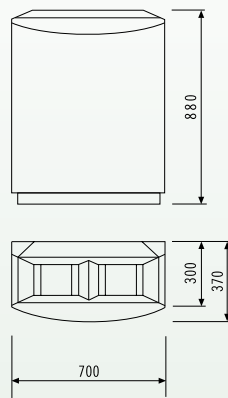

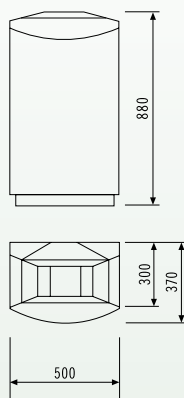

STEEL WALL FFW3 volume 3 x 40 l,
width 790 mm, depth 390 mm, height 960 mm

STEEL WALL, a fireproof, solid, inexpensive new model made from stainless steel or galvanized sheet steel, fits into any school corridor or anywhere it can get quite crowded. With a content of 40 l each per fraction, amply dimensioned and easy to handle. After releasing the lock, the upper part will automatically swing upwards.

The Temptation wall containers in the standard design line are the right solution for areas, in which space is limited. Due to its flat, galvanized back it can be assembled fast and safely; there is no need for any additional holders.

Premium class METRO, suspension container with a slanting extinguishing funnel attachment without any depositing surface, volume 50 l, incl. stainless-steel wall fastener. Developed and employed for **Stadtwerke München** (Munich Public Utility Company) for areas with high-safety requirements, such as underground stations.

FFW1 volume 70 l

FFW2 volume 2x 50 l

METRO FFMW1 volume 50 l
width 375 mm, depth 480 mm, height 800 mm

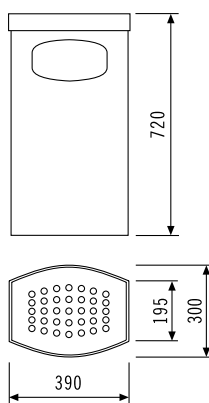

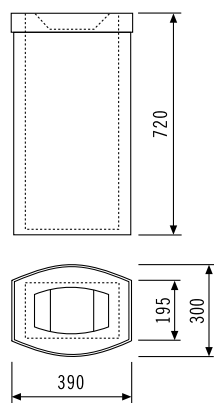

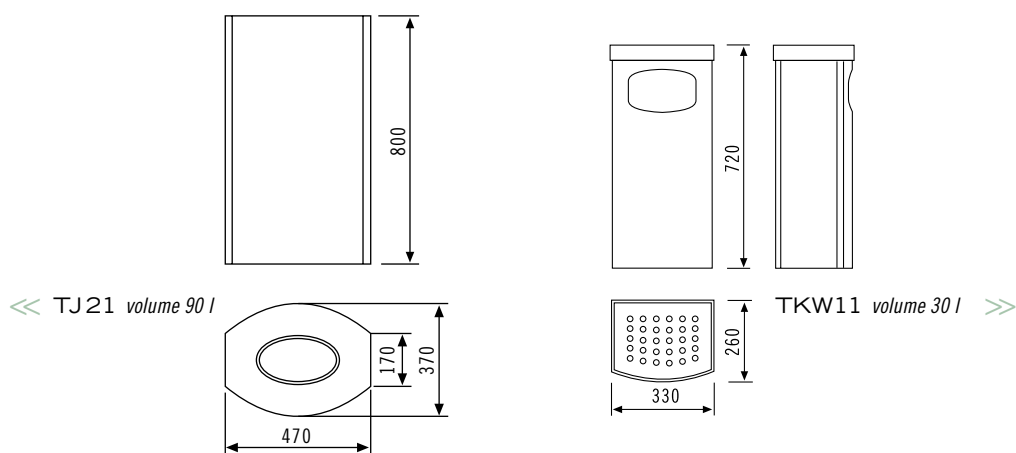

JUMBO TJ21 volume 90 l
width 470 mm, depth 370 mm, height 800 mm

The elegant Temptation waste paper baskets and stainless-steel pedestal ashtrays are for universal use – in front of entrances, in front of elevators, in self-service zones of banks and in front of non-smoker or in smoker zones. Available depending on requirements and in lines of most various designs, such as:

- As »Jumbo« TJ21 with a volume of 90 l and a large opening for insertion from above, with bag holder.
- As a fireproof variety, type FF11, with a metal interior container and a funnel attachment for gathering the waste paper.
- As a pedestal/waste container combination TK11 and TKW11 (wall container) with a handy interior container below the insertion. With a perforated-sheet cover concealing the galvanized ashtray inset the blowing out of cigarette ashes is avoided

FF11 volume 50 l

TK11 volume 40 l

AC4
Ø 330 mm, height 800 mm

The legal requirements for the protection of non-smokers in companies, restaurants, etc. are difficult to put into practice. Simple solutions are often impossible by means of structural requirements. In order not to lose any customers, appealing systems are required particularly for extravagantly designed entrances of modern buildings (e.g. airports). An optimal solution is offered by our functional, easy-care and also secure **stainless-steel pedestal ashtrays of the Temptation series**.

The clean overall impression and the sensible combination with an information board or a waste insertion opening all speak for these products.

- **The Models TD11 and TDA11** with an ashtray volume of 7 litres.
- **The Models TKD11 and TKDA11** with a waste volume of 40 litres and an ashtray volume of 3 litres.

TEMPTATION OUTDOOR PEDESTAL ASHTRAY

12

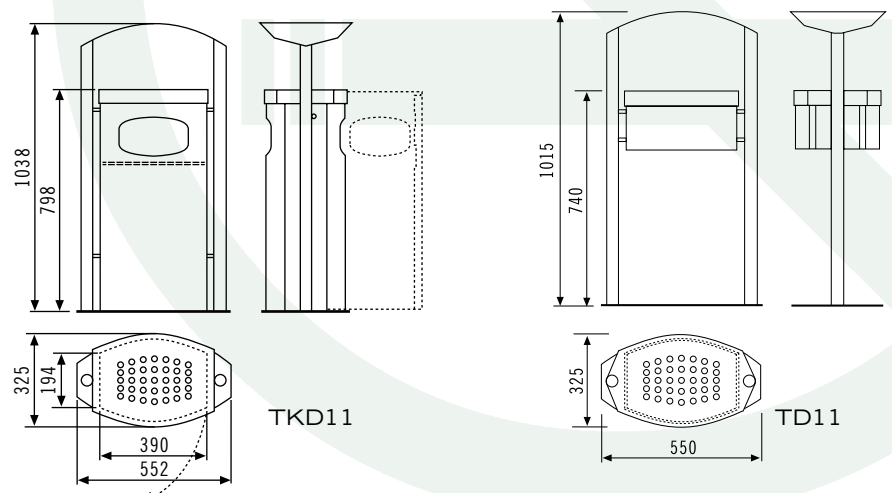

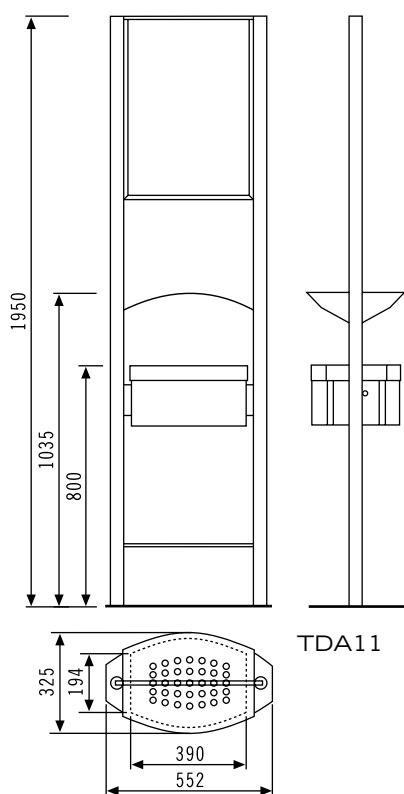

The ashtray attachments are secured by robust locks that have been flush-mounted at the sides.

Models with a waste insertion opening are by default equipped with a waste bag holder.

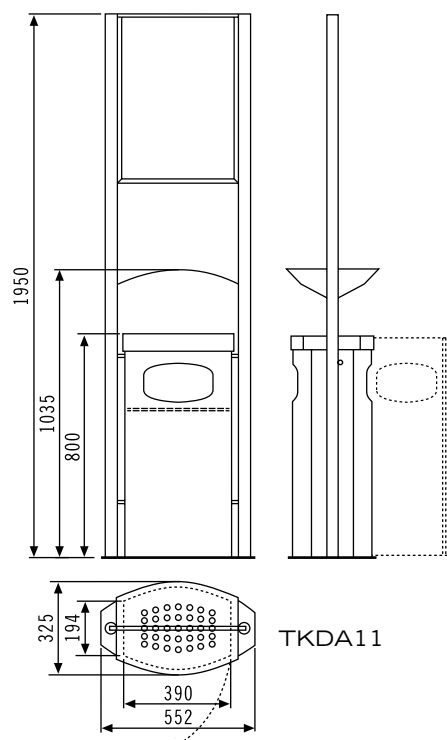

Simple and fast handling by emptying through the door.

The solid anchoring of the baseplate into the ground resists vandalism. For areas without any possibilities for fixing the unit we recommend our concrete-base variant.

TDA11

TKDA11

ORIGINAL

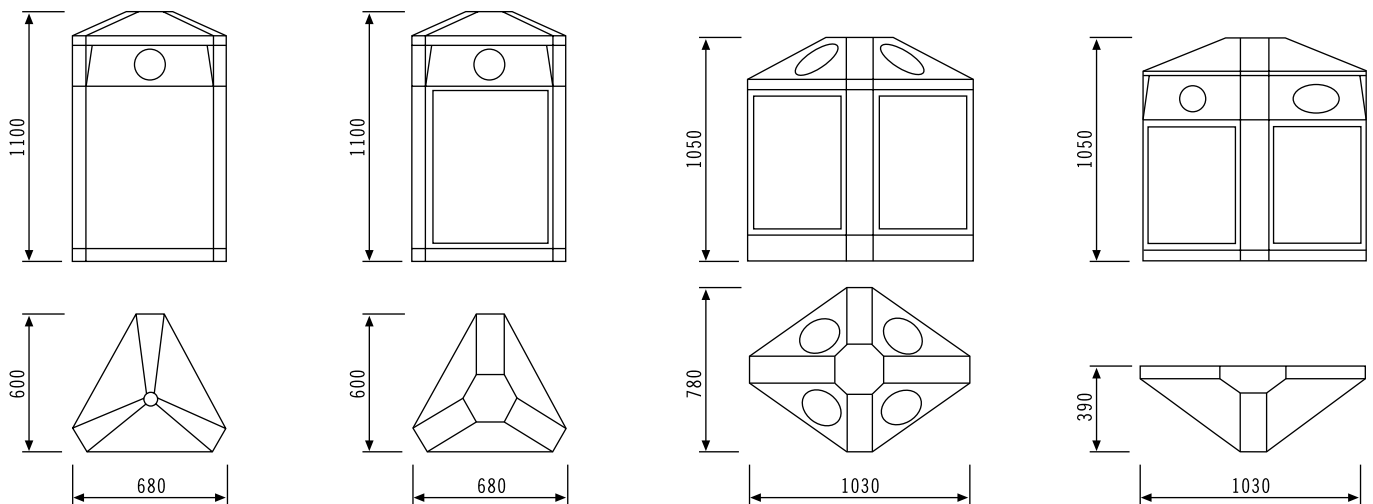

BS3 volumen 3 x 30 l
width 680 mm, depth 600 mm, height 1070 mm

The original reusable material container – a well-known classic

They have proven very successful in their long years of being used by the Deutsche Bahn AG (German Rail). Be it as the free-standing variant or as the space saving wall version, be it for covered locations (B models) or for outdoors (R models), different designs from simple collecting with an 80-l volume to waste sorting of up to 4 fractions are fitting for any location.

- All visible outer walls are made of stainless steel by default (Quality 1.4301/AISI 304) or on request also of galvanized steel sheets and RAL colour coated.
- The galvanized interior containers will slide out far when opening their doors. The waste bags can easily be exchanged now.
- All boxes are equipped with an integrated theft-proof ashtray or a flat cover.
- Strikingly printed large side plates with those containers featuring advertising and colourfully marked filling apertures or doors facilitate easy handling for the user..

R1/R3 volume 80 l bzw. 3 x 30 l

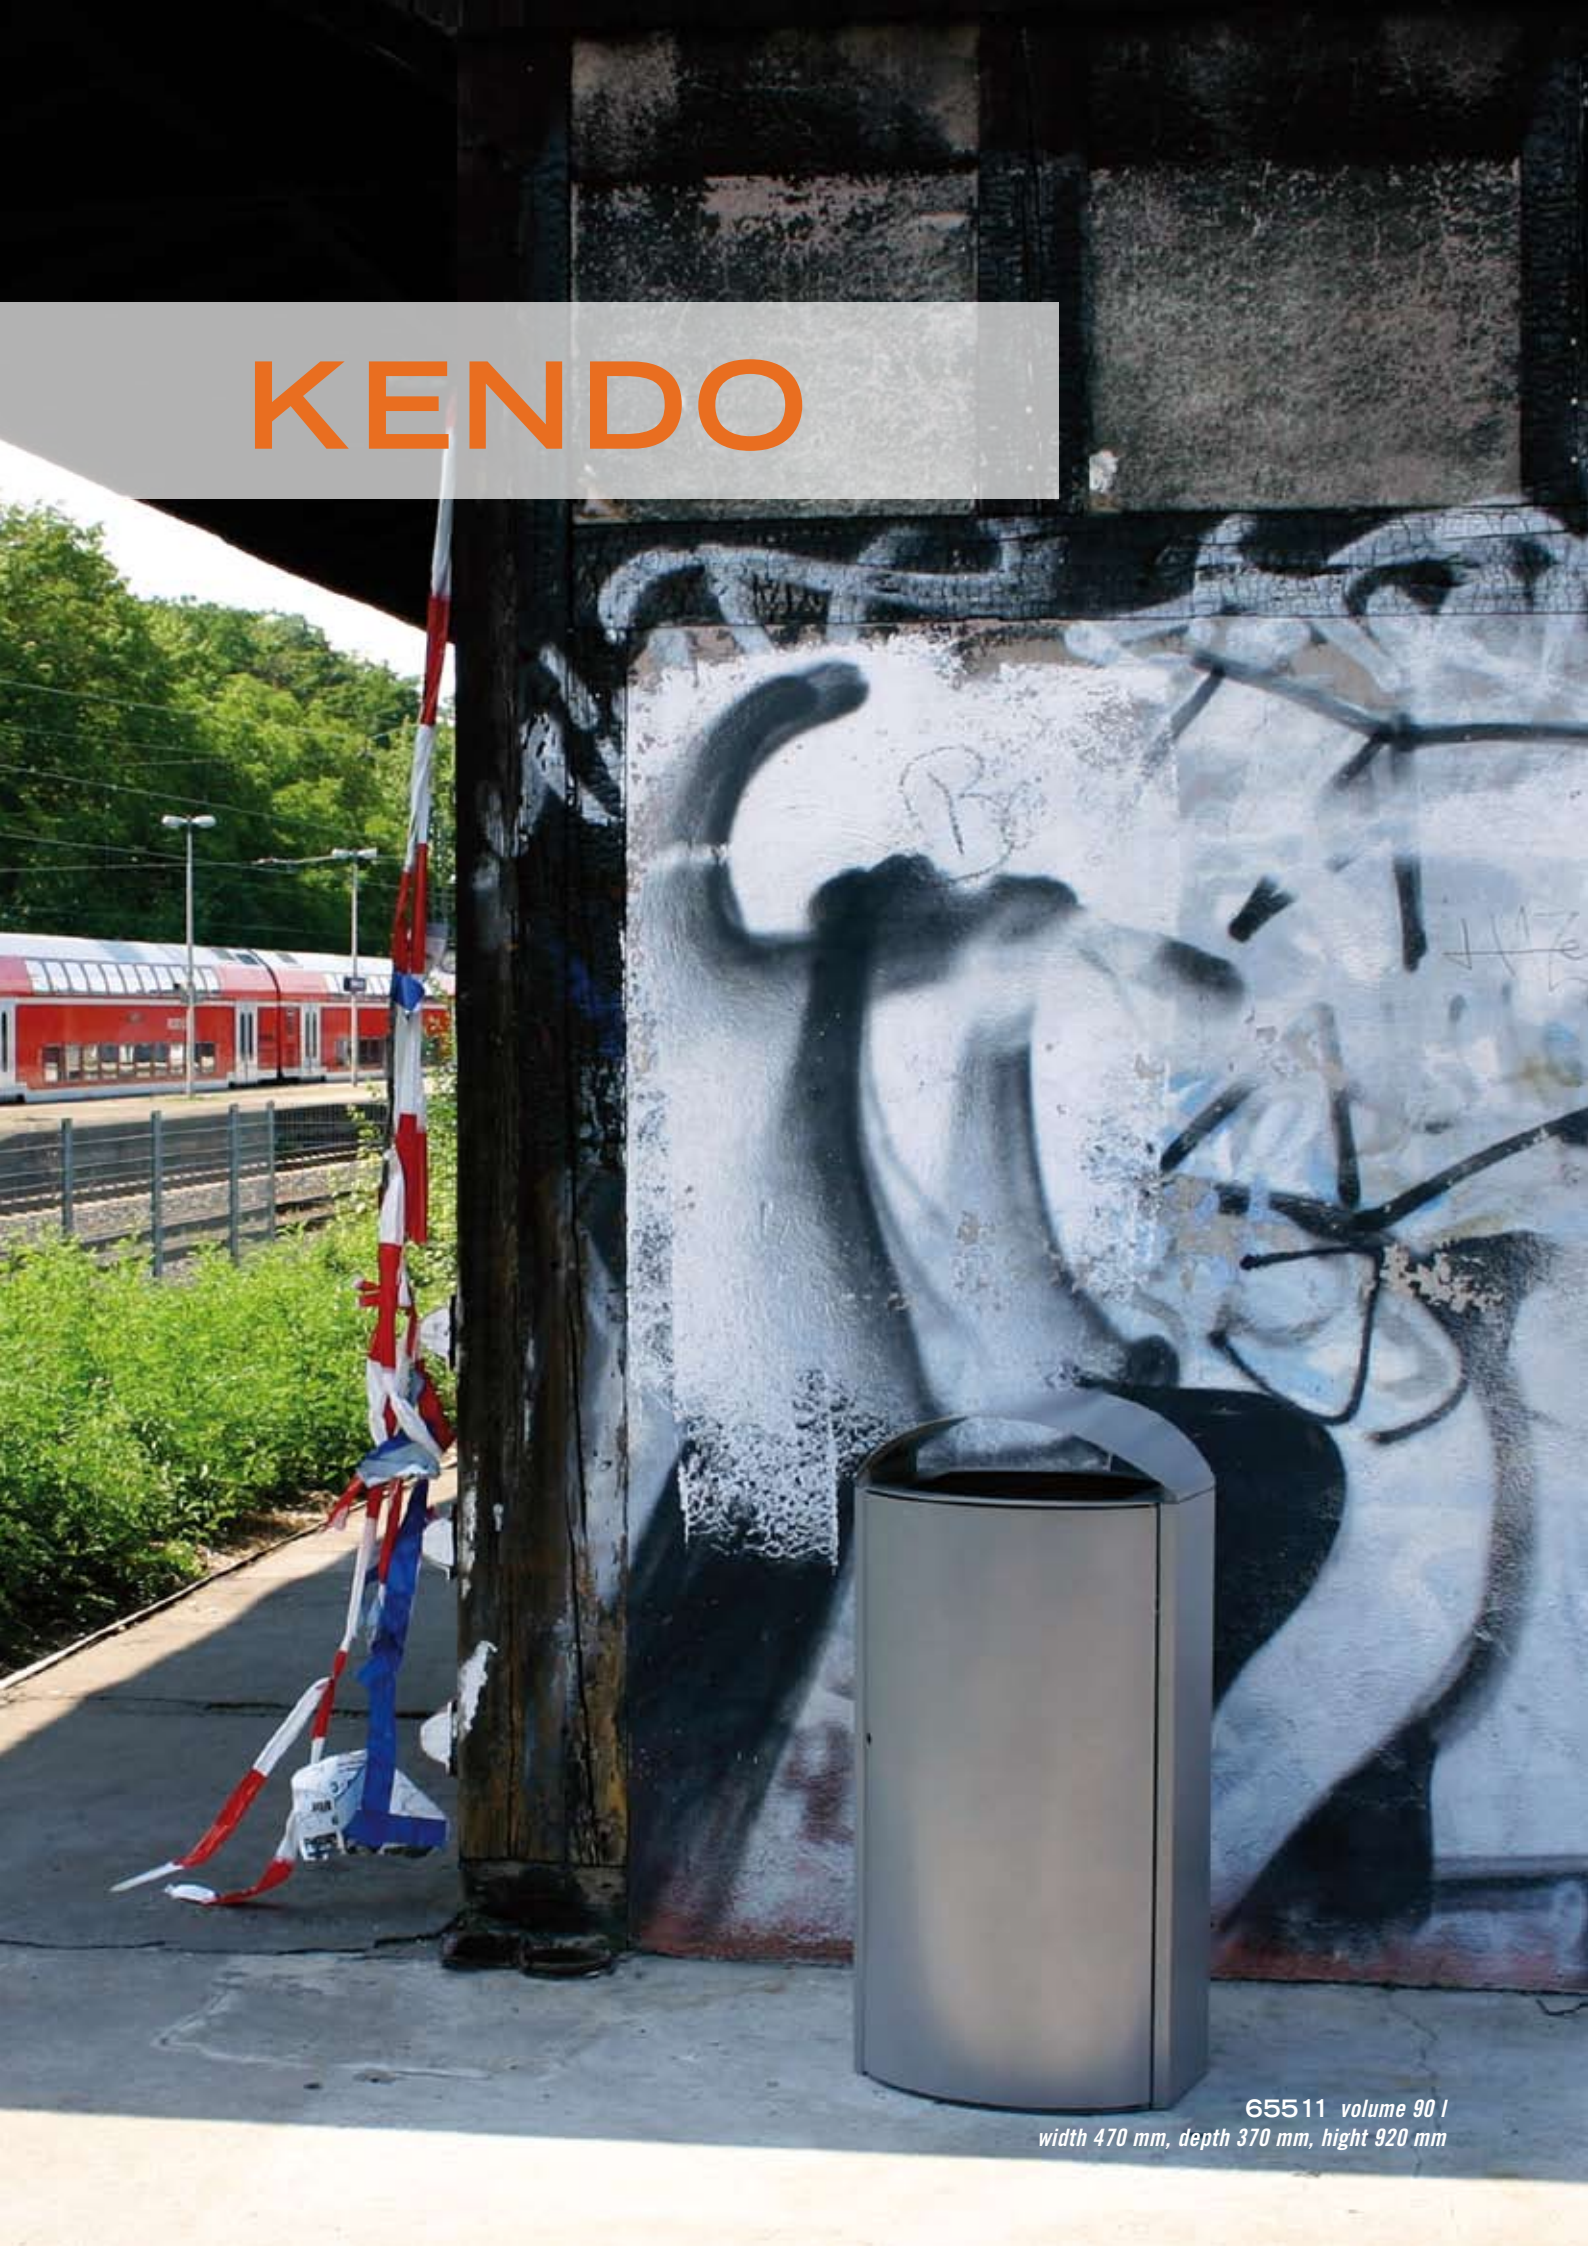

B4 volume 4 x 50 l

R2 volume 2 x 50 l

KENDO

65511 volume 90 l
width 470 mm, depth 370 mm, height 920 mm

»Wipe, and it's gone«

- A second coating, oven-hardened at 200 degrees
- Smearings are removed practically residue-free, without any aggressive detergents, with a cloth only
- Stickers are removed much easier

Proved and tested as for their design, optimally prepared against external force, with a sensational new surface coating – »Wipe, and it's gone«.

Surface sealing is best comparable with a glass surface that hardly offers any contact surface to any stains. AUWEKO is launching a **new line of waste collectors**, that will keep their high-quality appearance for years and will reduce the cost of regular cleaning and maintenance tremendously.

If sprays / graffiti or stickers cause stains, the **new protective finish** will help to shorten the cleaning time enormously. »Wipe, and it's gone« – only with a cloth, and possibly some water: It couldn't be done any simpler.

The Deutsche Bahn AG could also be won over, and they declared KENDO to be the **winner** in a Europe-wide bidding.

In many regions, such as in Hamburg, Frankfurt and Duisburg, the containers have been deployed successfully. The first success stories from precarious railway stations have been sent in.

*Wipe
and it's
gone*

The Kendo containers – veritable heavyweights

- structural supporting curved exterior walls, connected to solid, flat side frames
- extra reinforced curved door incl. welded hinges
- doors with retaining cross-sections that shall prevent overstretching
- reinforced roof design tightly connected to the frame structure
- insertion sheets with reinforcing profiles, welded to the roof structure
- side frames, front and back panel, floor assembly having sheets being 2.0 to 3.0 mm thick
- inner container made of zinc plated sheet steel, sealed with sanitary silicon, for models with a volume of 60 to 90 l
- catch basin (3 l) made of zinc plated sheet steel, sealed with sanitary silicon, for models with a volume of 120 l and bag holder

KENDO

height: 850 mm

model: 65511 oder 65612 (incl. back holder)
volume: 90 litre oder 120 litre
width: 470 mm
depth: 370 mm
height: 920 mm

»I was surprised that even Edding can be wiped out easily!«

»At this station things have been calm for half a year now!«

»I like the idea very much that you can make your choice from a design line. Thus we can deploy the Kendo at critical railway stations and can equip the other stations with the less expensive Capital . Containers. An economically sound solution.«

*Kendo fittings:
heft-proof stainless steel brackets,
wall mounting profiles*

CAPITAL

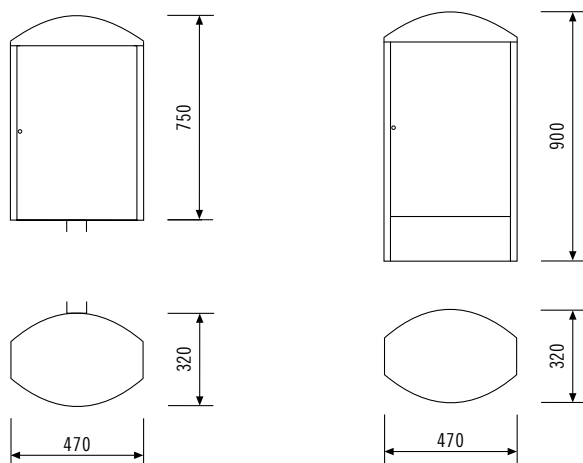

60731-7 volume 90 l incl. ashtray
width 470 mm, depth 370 mm, height 920 mm

The Capital container – the classical waste paper basket

This product series is particularly suited for application in the city, on the street, in pedestrian zones or in green spaces:

- made from 2 mm thick stainless steel (quality 1.430 1/AISI 304)
- available as a suspension or a pedestal model, also in different ashtray variants all
- models have been equipped with zinc plated inner containers and can be equipped with a waste bag
- only the pedestal model (type 60832) with a 120 l volume has been equipped with a waste bag holder

An elegant and high-quality solution

60131 volume 50 l

60231 volume 50 l

with a volume of 50 to 60 l*

*Ashtrays for pedestal models with
a volume of 90 to 120 l*

*Ashtray at the side for suspension
models with a volume of 50 to 60 l*

Details on request

85211 volume 60 l
width 470 mm, depth 320 mm, height 850 mm

In addition to the stainless steel models there is the Capital series being nearly identical, also **galvanized sheet steel and coated with colour DB 702 by default.**

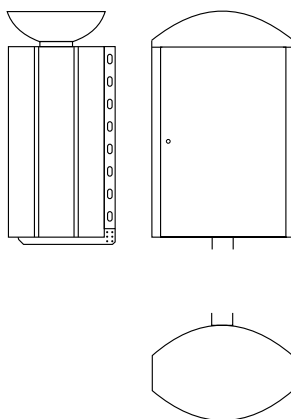

These Capital models have also been equipped with:

- curved covering as a protection from rain, without any storage surface. The insertion openings that have thus been downsized will lessen the misuse with domestic garbage
- integrated spring locks for locking the front door
- a retaining profile preventing the door hinges from overstretching
- an insertion sheet giving high stability to the structure and conducting the thrown-in waste into the inner container / waste bag

71511 volume 65 l

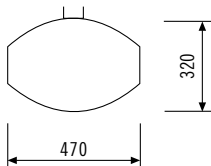

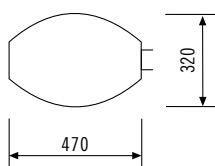

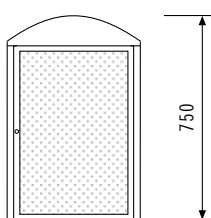

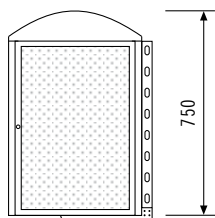

61231 volume 50 l

Capital with an integrated information or reference surface in DIN A2 format respectively

Countless possibilities to combine the useful with the pleasant things feature this container. As it contains simply more options. The easily chargeable integrated frame with a transparent PET protector plate is ideal for logos, information or notes of any kind.

Messages nobody will miss

A few examples of how these eye-catching surfaces are suitable for a variety of means of communication:

Advertising/Information on your own behalf

The Wirtschaftsbetriebe Duisburg (Duisburg Enterprises) address current topics with their regular poster campaigns. This way every citizen is briefed in next to no time.

Sponsoring

Tradespeople of the City of Mayen sponsored the design containers for their City and used the surface as signposts pointing the way and for advertising on their own behalf. a pilot project of dual benefit!

Third-party advertising

In the City of Düren regional companies may use the surface for advertising at € 15 per month – within 2 years the investment costs were already regained.
